***SPECIAL VASCULAR PLANTS,  
BRYOPHYTES, AND LICHENS  
LIST***

***August 2006***

**Citation:** California Department of Fish and Game, Natural Diversity Database. August 2006. Special Vascular Plants, Bryophytes, and Lichens List. Quarterly publication. 89 pp.

## SPECIAL PLANTS

“Special Plants” is a broad term used to refer to all the plant taxa inventoried by the Department of Fish and Game’s California Natural Diversity Database (CNDDB), regardless of their legal or protection status. Special Plants include vascular plants and high priority bryophytes (mosses, liverworts, and hornworts) which are a recent addition. Special Plant taxa are species, subspecies, or varieties that fall into one or more of the following categories:

- Officially listed by California or the Federal Government as Endangered, Threatened, or Rare;
- A candidate for state or federal listing as Endangered, Threatened, or Rare;
- Taxa which meet the criteria for listing, even if not currently included on any list, as described in Section 15380 of the California Environmental Quality Act (CEQA) Guidelines;
- A Bureau of Land Management, U.S. Fish and Wildlife Service, or U.S. Forest Service Sensitive Species;
- Taxa listed in the California Native Plant Society’s *Inventory of Rare and Endangered Plants of California*;
- Taxa that are biologically rare, very restricted in distribution, or declining throughout their range but not currently threatened with extirpation;
- Population(s) in California that may be peripheral to the major portion of a taxon’s range but are threatened with extirpation in California; and
- Taxa closely associated with a habitat that is declining in California at a significant rate (e.g., wetlands, riparian, old growth forests, desert aquatic systems, native grasslands, valley shrubland habitats, vernal pools, etc.).

**This list contains taxa that are actively inventoried by the CNDDB (Note: a “yes” in the right column of the list) as well as an almost equal number of taxa which it tracks but as yet has no computerized site information.** For the latter taxa, we maintain site and other information in manual files. These plants will be added to the computerized inventory as time permits or when we have enough information to determine that they fulfill our rarity and/or endangerment criteria. For more copies of this list or other CNDDB information, call (916) 324-3812 or email Karen Bates, Information Services, at [kbates@dfg.ca.gov](mailto:kbates@dfg.ca.gov).

NOTE: We have removed the designation “**Federal Species of Concern**.” Please do not be concerned; the federal species of concern list was an internal FWS list maintained by their Sacramento office of taxa that were formerly designated C1 and C2 plus some other miscellaneous taxa. Once we discovered that the list was seldom updated and generated only from Sacramento without review by other FWS offices, we decided we were not doing you a service by including this designation. The taxa are just as important as before and should be given consideration in your environmental work.

## **California Heritage (CNDDDB) Element Ranking For Plants**

Roxanne Bittman, CNDDDB Botanist  
August 1, 2006

All Heritage Programs, such as the California Natural Diversity Database (CNDDDB) use the same ranking methodology, originally developed by The Nature Conservancy and now maintained by Natureserve. It includes a **Global rank** (G rank), describing the rank for a given taxon over its entire distribution and a **State rank** (S rank), describing the rank for the taxon over its state distribution. For subspecies and varieties, there is also a "T" rank describing the global rank for the subspecies. The second page of this document details the criteria used to assign element ranks, from G1 to G5 for the Global rank and from S1 to S5 for the State rank. Procedurally, state programs such as the CNDDDB develop Global ranks which are checked for consistency and logical errors by Natureserve at the national level.

The first step to ranking is based on *rarity*, and involves counting total occurrences, counting the number of "good" (highly ranked) occurrences and counting individuals for a given plant. An occurrence for a plant is defined as any population or group of nearby populations located more than 0.25 miles from any other population. Element occurrences can be ranked A-D, depending on apparent degree of viability and habitat condition. Usually the two biggest factors are population size and habitat quality. However, there is more to ranking than just counting element occurrences and individuals. Some of the other considerations specific to plants or lichens include:

- An aerial view of the extent of the distribution. Is the taxon very narrowly distributed (even if it has lots of occurrences), or is it scattered over a wide area?
- Are the element occurrences very large, very small, or mixed in size? Are small occurrences viable over time?
- What is the total acreage of the element occurrences?
- Is the element located in a vulnerable habitat type, such as in wetlands?
- What aspects of the biology and ecology of the element should we consider when ranking it? Some aspects to consider are life form, life span, demographic concerns, persistence of seed bank, reaction to disturbance, dependence on pollinators or seed dispersal agents, restriction to soil type and other "niche breadth" concerns, and more.
- Is anything known about trends for the element? Do we think the species is increasing, decreasing or stable?

With the above considerations in mind, refer to the next page for the numerical definitions for G1-5 and S1-5. A taxon's ranking status may be adjusted up or down depending upon the considerations above.

## ELEMENT RANKING

### GLOBAL RANKING

The *global rank* (G-rank) is a reflection of the overall condition of an element throughout its global range.

### SPECIES OR NATURAL COMMUNITY LEVEL

- G1** = Less than 6 viable element occurrences (Eos) OR less than 1,000 individuals OR less than 2,000 acres.  
**G2** = 6-20 Eos OR 1,000-3,000 individuals OR 2,000-10,000 acres.  
**G3** = 21-80 Eos OR 3,000-10,000 individuals OR 10,000-50,000 acres.  
**G4** = Apparently secure; this rank is clearly lower than G3 but factors exist to cause some concern; i.e., there is some threat, or somewhat narrow habitat.  
**G5** = Population or stand demonstrably secure to ineradicable due to being commonly found in the world.

### SUBSPECIES LEVEL

Subspecies receive a **T-rank** attached to the G-rank. With the subspecies, the G-rank reflects the condition of the entire species, whereas the T-rank reflects the global situation of just the subspecies or variety. For example: *Chorizanthe robusta* var. *hartwegii*. This plant is ranked G2T1. The G-rank refers to the whole species range i.e., *Chorizanthe robusta*. The T-rank refers only to the global condition of var. *hartwegii*.

---

### STATE RANKING

The *state rank* (S-rank) is assigned much the same way as the global rank, except state ranks in California often also contain a threat designation attached to the S-rank.

- S1** = Less than 6 Eos OR less than 1,000 individuals OR less than 2,000 acres  
    S1.1 = very threatened  
    S1.2 = threatened  
    S1.3 = no current threats known
- S2** = 6-20 Eos OR 1,000-3,000 individuals OR 2,000-10,000 acres  
    S2.1 = very threatened  
    S2.2 = threatened  
    S2.3 = no current threats known
- S3** = 21-80 Eos or 3,000-10,000 individuals OR 10,000-50,000 acres  
    S3.1 = very threatened  
    S3.2 = threatened  
    S3.3 = no current threats known
- S4** = Apparently secure within California; this rank is clearly lower than S3 but factors exist to cause some concern; i.e. there is some threat, or somewhat narrow habitat. NO THREAT RANK.
- S5** = Demonstrably secure to ineradicable in California. NO THREAT RANK.

---

#### Notes:

1. Other considerations used when ranking a species or natural community include the pattern of distribution of the element on the landscape, fragmentation of the population/stands, and historical extent as compared to its modern range. It is important to take a **bird's eye or aerial view** when ranking sensitive elements rather than simply counting element occurrences.
2. Uncertainty about the rank of an element is expressed in two major ways:

By expressing the rank as a **range** of values:  
e.g., S2S3 means the rank is somewhere between S2 and S3.

By adding a **?** to the rank: e.g., S2?. This represents more certainty than S2S3, but less certainty than S2.
3. Other symbols:

GH	All sites are <b>historical</b> ; the element has not been seen for at least 20 years, but suitable habitat still exists (SH = All California sites are historical).
GX	All sites are <b>extirpated</b> ; this element is extinct in the wild (SX = All California sites are extirpated).
GXC	Extinct in the wild; exists in cultivation.
G1Q	The element is very rare, but there are <b>taxonomic questions</b> associated with it.
T	Rank applies to a subspecies or variety

## **SPECIAL LICHENS**

There are a few lichens in California for which we have adequate information to place them on the list of Special taxa. They appear after the bryophytes at the beginning of the list. We are not including lichens for which little is known, even if they are only known from a few sites in California because the level of information is not developed enough. As information on individual taxa becomes better developed, more lichens may be added.

Note that lichens are not plants, but a symbiotic relationship between a fungus and either green algae or cyanobacteria.

## **The California Native Plant Society's (CNPS) Lists**

Modified 7/25/2006 from CNPS's *Inventory of Rare and Endangered Plants of California* (Sixth edition. CNPS. 2001. David Tibor, Convening Editor. X + 388pp).

- 1A. Presumed extinct in California
- 1B. Rare or Endangered in California and elsewhere
- 2. Rare or Endangered in California, more common elsewhere
- 3. Plants for which we need more information - Review list
- 4. Plants of limited distribution - Watch list

### **List 1A: Plants Presumed Extinct in California**

The plants of List 1A are presumed extinct because they have not been seen or collected in the wild in California for many years. Although most of them are restricted to California, a few are found in other states as well. In many cases, repeated attempts have been made to rediscover these plants by visiting known historical locations. Even after such diligent searching, we are constrained against saying that they are extinct, since for most of them rediscovery remains a distinct possibility. Note that care should be taken to distinguish between "extinct" and "extirpated." A plant is extirpated if it has been locally eliminated, but it may be doing well elsewhere in its range.

### **List 1B: Plants Rare, Threatened, or Endangered in California and Elsewhere.**

The plants of List 1B are rare throughout their range. All but a few are endemic to California. All of them are judged to be vulnerable under present circumstances or to have a high potential for becoming so because of their limited or vulnerable habitat, their low numbers of individuals per population (even though they may be wide ranging), or their limited number of populations. Most of the plants of List 1B have declined significantly over the last century.

### **List 2: Plants Rare, Threatened, or Endangered in California, but More Common Elsewhere**

Except for being common beyond the boundaries of California, the plants of List 2 would have appeared on List 1B. From the federal perspective, plants common in other states or countries are not eligible for consideration under the provisions of the Endangered Species Act. Until 1979, a similar policy was followed in California. However, after the passage of the Native Plant Protection Act, plants were considered for protection without regard to their distribution outside the state.

### **List 3: Plants About Which We Need More Information - A Review list**

The plants that comprise List 3 are united by one common theme--we lack the necessary information to assign them to one of the other lists or to reject them. Nearly all of the plants remaining on List 3 are taxonomically problematic.

### **List 4: Plants of Limited Distribution - A Watch list**

The plants in this category are of limited distribution or infrequent throughout a broader area in California, and their vulnerability or susceptibility to threat appears low at this time. While we cannot call these plants "rare" from a statewide perspective, they are uncommon enough that their status should be monitored regularly. Should the degree of endangerment or rarity of a List 4 plant change, we will transfer it to a more appropriate list or deleted from consideration.

#### **Threat ranks:**

Recently, CNPS added a decimal threat rank to the List ranks to parallel that used by the CNDDDB. This extension replaces the E (Endangerment) value from the R-E-D Code. CNPS ranks therefore read like this: 1B.1, 1B.2, etc.

#### **New Threat Code extensions and their meanings:**

.1 - Seriously endangered in California (over 80% of occurrences threatened / high degree and immediacy of threat)

.2 – Fairly endangered in California (20-80% occurrences threatened)

.3 – Not very endangered in California (<20% of occurrences threatened or no current threats known)

Note that all List 1A (presumed extinct in California) and some List 3 (need more information- a review list) plants lacking any threat information receive no threat code extension. Also, these Threat Code guidelines represent a starting point in the assessment of threat level. Other factors, such as habitat vulnerability and specificity, distribution, and condition of occurrences, are also considered in setting the Threat Code.

# **Guidelines for Assessing the Effects of Proposed Projects on Rare, Threatened, and Endangered Plants and Natural Communities**

State of California  
THE RESOURCES AGENCY  
Department of Fish and Game  
December 9, 1983  
Revised May 8, 2000

The following recommendations are intended to help those who prepare and review environmental documents determine **when** a botanical survey is needed, **who** should be considered qualified to conduct such surveys, **how** field surveys should be conducted, and **what** information should be contained in the survey report. The Department may recommend that lead agencies not accept the results of surveys that are not conducted according to these guidelines.

- 1.** Botanical surveys are conducted in order to determine the environmental effects of proposed projects on all rare, threatened, and endangered plants and plant communities. Rare, threatened, and endangered plants are not necessarily limited to those species which have been "listed" by state and federal agencies but should include any species that, based on all available data, can be shown to be rare, threatened, and/or endangered under the following definitions:

A species, subspecies, or variety of plant is "endangered" when the prospects of its survival and reproduction are in immediate jeopardy from one or more causes, including loss of habitat, change in habitat, over-exploitation, predation, competition, or disease. A plant is "threatened" when it is likely to become endangered in the foreseeable future in the absence of protection measures. A plant is "rare" when, although not presently threatened with extinction, the species, subspecies, or variety is found in such small numbers throughout its range that it may be endangered if its environment worsens.

Rare natural communities are those communities that are of highly limited distribution. These communities may or may not contain rare, threatened, or endangered species. The most current version of the California Natural Diversity Database's List of California Terrestrial Natural Communities may be used as a guide to the names and status of communities.

- 2.** It is appropriate to conduct a botanical field survey to determine if, or to the extent that, rare, threatened, or endangered plants will be affected by a proposed project when:

- a. Natural vegetation occurs on the site, it is unknown if rare, threatened, or endangered plants or habitats occur on the site, and the project has the potential for direct or indirect effects on vegetation; or
- b. Rare plants have historically been identified on the project site, but adequate information for impact assessment is lacking.

- 3.** Botanical consultants should possess the following qualifications:

- a. Experience conducting floristic field surveys;
- b. Knowledge of plant taxonomy and plant community ecology;
- c. Familiarity with the plants of the area, including rare, threatened, and endangered species;
- d. Familiarity with the appropriate state and federal statutes related to plants and plant collecting; and,
- e. Experience with analyzing impacts of development on native plant species and communities.

- 4.** Field surveys should be conducted in a manner that will locate any rare, threatened, or endangered species that may be present. Specifically, rare, threatened, or endangered plant surveys should be:

- a.** Conducted in the field at the proper time of year when rare, threatened, or endangered species are both evident and identifiable. Usually, this is when the plants are flowering.

When rare, threatened, or endangered plants are known to occur in the type(s) of habitat present in the project area, nearby accessible occurrences of the plants (reference sites) should be observed to determine that the species are identifiable at the time of the survey.

- b.** Floristic in nature. A floristic survey requires that every plant observed be identified to the extent necessary to determine its rarity and listing status. In addition, a sufficient number of visits spaced

throughout the growing season are necessary to accurately determine what plants exist on the site. In order to properly characterize the site and document the completeness of the survey, a complete list of plants observed on the site should be included in every botanical survey report.

c. Conducted in a manner that is consistent with conservation ethics. Collections (voucher specimens) of rare, threatened, or endangered species, or suspected rare, threatened, or endangered species should be made only when such actions would not jeopardize the continued existence of the population and in accordance with applicable state and federal permit requirements. A collecting permit from the Habitat Conservation Planning Branch of DFG is required for collection of state-listed plant species. Voucher specimens should be deposited at recognized public herbaria for future reference. Photography should be used to document plant identification and habitat whenever possible, but especially when the population cannot withstand collection of voucher specimens.

d. Conducted using systematic field techniques in all habitats of the site to ensure a thorough coverage of potential impact areas.

e. Well documented. When a rare, threatened, or endangered plant (or rare plant community) is located, a California Native Species (or Community) Field Survey Form or equivalent written form, accompanied by a copy of the appropriate portion of a 7.5 minute topographic map with the occurrence mapped, should be completed and submitted to the Natural Diversity Database. Locations may be best documented using global positioning systems (GPS) and presented in map and digital forms as these tools become more accessible.

5. Reports of botanical field surveys should be included in or with environmental assessments, negative declarations and mitigated negative declarations, Timber Harvesting Plans (THPs), EIR's, and EIS's, and should contain the following information:

- a. Project description, including a detailed map of the project location and study area.
- b. A written description of biological setting referencing the community nomenclature used and a vegetation map.
- c. Detailed description of survey methodology.
- d. Dates of field surveys and total person-hours spent on field surveys.
- e. Results of field survey including detailed maps and specific location data for each plant population found. Investigators are encouraged to provide GPS data and maps documenting population boundaries.
- f. An assessment of potential impacts. This should include a map showing the distribution of plants in relation to proposed activities.
- g. Discussion of the significance of rare, threatened, or endangered plant populations in the project area considering nearby populations and total species distribution.
- h. Recommended measures to avoid impacts.
- i. A list of all plants observed on the project area. Plants should be identified to the taxonomic level necessary to determine whether or not they are rare, threatened or endangered.
- j. Description of reference site(s) visited and phenological development of rare, threatened, or endangered plant(s).
- k. Copies of all California Native Species Field Survey Forms or Natural Community Field Survey Forms.
- l. Name of field investigator(s).
- m. References cited, persons contacted, herbaria visited, and the location of voucher specimens.

# Special Vascular Plants, Bryophytes, and Lichens List

California Department of Fish and Game  
Natural Diversity Database

## Bryophytes

### *Anomobryum julaceum*

slender silver-moss  
NBMUS80010  
**Fed:** None  
**State:** None  
**RANK:** G4/S1.3  
**CNPS List:** 2  
**Records in CNDBB:** Yes

### *Atractylocarpus flagellaceus*

flagella-like  
attractylocarpus  
NBMUS84010  
**Fed:** None  
**State:** None  
**RANK:** G5/S1.2  
**CNPS List:** 2  
**Records in CNDBB:** Yes

### *Bruchia bolanderi*

Bolander's bruchia  
NBMUS13010  
**Fed:** None  
**State:** None  
**RANK:** G2G3/S2.2  
**CNPS List:** 2  
**Records in CNDBB:** Yes

### *Didymodon norrisii*

Norris's beard-moss  
NBMUS2C0H0  
**Fed:** None  
**State:** None  
**RANK:** G2G3/S2.2  
**CNPS List:** 2  
**Records in CNDBB:** Yes

### *Disceum nudum*

naked flag-moss  
NBMUS2E010  
**Fed:** None  
**State:** None  
**RANK:** G3G4/S1.2  
**CNPS List:** 2  
**Records in CNDBB:** Yes

### *Entosthodon kochii*

Koch's cord-moss  
NBMUS2P050  
**Fed:** None  
**State:** None  
**RANK:** G1/S1.3  
**CNPS List:** 1B  
**Records in CNDBB:** Yes

## *Fissidens aphelotaxifolius*

brook pocket-moss  
NBMUS2W290  
**Fed:** None  
**State:** None  
**RANK:** GU/S1.2  
**CNPS List:** 2  
**Records in CNDBB:** Yes

## *Fissidens pauperculus*

minute pocket-moss  
NBMUS2W0U0  
**Fed:** None  
**State:** None  
**RANK:** G3?/S1.2  
**CNPS List:** 1B  
**Records in CNDBB:** Yes

## *Geothallus tuberosus*

Campbell's liverwort  
NBHEP1C010  
**Fed:** None  
**State:** None  
**RANK:** G1/S1.1  
**CNPS List:** 1B  
**Records in CNDBB:** Yes

## *Helodium blandowii*

Blandow's bog-moss  
NBMUS3C010  
**Fed:** None  
**State:** None  
**RANK:** G5/S1.3  
**CNPS List:** 2  
**Records in CNDBB:** Yes

## *Meesia triquetra*

three-ranked hump-moss  
NBMUS4L020  
**Fed:** None  
**State:** None  
**RANK:** G5/S2.2  
**CNPS List:** 2  
**Records in CNDBB:** Yes

## *Meesia uliginosa*

broad-nerved hump-moss  
NBMUS4L030  
**Fed:** None  
**State:** None  
**RANK:** G4/S2.2  
**CNPS List:** 2  
**Records in CNDBB:** Yes

## *Mielichhoferia elongata*

elongate copper-moss  
NBMUS4Q022  
**Fed:** None  
**State:** None  
**RANK:** G4?/S2.2  
**CNPS List:** 2  
**Records in CNDBB:** Yes

## *Mielichhoferia tehamensis*

Lassen Peak copper-moss  
NBMUS4Q030  
**Fed:** None  
**State:** None  
**RANK:** G1/S1.3  
**CNPS List:** 1B  
**Records in CNDBB:** Yes

## *Myurella julacea*

small mosetail-moss  
NBMUS4U010  
**Fed:** None  
**State:** None  
**RANK:** G5/S1.3  
**CNPS List:** 2  
**Records in CNDBB:** Yes

## *Orthotrichum shevockii*

Shevock's bristle-moss  
NBMUS56150  
**Fed:** None  
**State:** None  
**RANK:** G1/S1.3  
**CNPS List:** 1B  
**Records in CNDBB:** Yes

## *Orthotrichum sjputii*

Sjput's bristle-moss  
NBMUS56160  
**Fed:** None  
**State:** None  
**RANK:** G1/S1.3  
**CNPS List:** 1B  
**Records in CNDBB:** Yes

## *Pohlia tundrae*

tundra thread-moss  
NBMUS5S1B0  
**Fed:** None  
**State:** None  
**RANK:** G2G3/S2.3  
**CNPS List:** 2  
**Records in CNDBB:** Yes

## *Pterygoneurum californicum*

California chalk-moss  
NBMUS65020  
**Fed:** None  
**State:** None  
**RANK:** GH/SH  
**CNPS List:** 1B  
**Records in CNDBB:** Yes

## *Schizymenium shevockii*

Shevock's copper-moss  
NBMUSA1010  
**Fed:** None  
**State:** None  
**RANK:** G1/S1.2  
**CNPS List:** 1B  
**Records in CNDBB:** Yes

## *Scopelophila cataractae*

tongue-leaf copper-moss  
NBMUS6U010  
**Fed:** None  
**State:** None  
**RANK:** G3/S1.2  
**CNPS List:** 2  
**Records in CNDBB:** Yes

## *Sphaerocarpos drewei*

bottle liverwort  
NBHEP35030  
**Fed:** None  
**State:** None  
**RANK:** G1/S1.1  
**CNPS List:** 1B  
**Records in CNDBB:** Yes

## *Sphagnum strictum*

pale peat-moss  
NBMUS6Z170  
**Fed:** None  
**State:** None  
**RANK:** G5/S1.3  
**CNPS List:** 2  
**Records in CNDBB:** Yes

## *Tortella alpicola*

alpine crisp-moss  
NBMUS7K100  
**Fed:** None  
**State:** None  
**RANK:** GNR/S1.3  
**CNPS List:** 2  
**Records in CNDBB:** Yes

***Tortula californica***

California screw-moss

NBMUS7L090

Fed: None

State: None

RANK: G2G4/S2.2

CNPS List: 1B

Records in CNDDDB: Yes

***Trichodon cylindricus***

cylindrical trichodon

NBMUS7N020

Fed: None

State: None

RANK: G4G5/S2.2

CNPS List: 2

Records in CNDDDB: Yes

***Triquetrella californica***

coastal triquetrella

NBMUS7S010

Fed: None

State: None

RANK: G1/S1.2

CNPS List: 1B

Records in CNDDDB: Yes

## Lichens

### *Graphis saxorum*

Baja rock lichen  
NLTES29470  
**Fed:** None  
**State:** None  
**RANK:** G1G3/S1S3  
**CNPS List:**  
**Records in CNDBB:** Yes

### *Mobergia calculiformis*

light gray lichen  
NLTES41770  
**Fed:** None  
**State:** None  
**RANK:** G1 /S1.1  
**CNPS List:**  
**Records in CNDBB:** Yes

### *Solorina spongiosa*

Solorina spongiosa  
NLT0028030  
**Fed:** None  
**State:** None  
**RANK:** G3G5/S1.2  
**CNPS List:**  
**Records in CNDBB:** Yes

### *Sulcaria isidiifera*

splitting yarn lichen  
NLTEST0020  
**Fed:** None  
**State:** None  
**RANK:** G1/S1.1  
**CNPS List:**  
**Records in CNDBB:** Yes

### *Texosporium sancti-jacobi*

woven-spored lichen  
NLTEST7980  
**Fed:** None  
**State:** None  
**RANK:** G2/S1.1  
**CNPS List:**  
**Records in CNDBB:** Yes

### *Thamnolia vermicularis*

thamnolia lichen  
NLTES43860  
**Fed:** None  
**State:** None  
**RANK:** G3G5/S1.1  
**CNPS List:**  
**Records in CNDBB:** Yes

## *Usnea longissima*

long-beard lichen  
NLLEC5P420  
**Fed:** None  
**State:** None  
**RANK:** G4/S4.2  
**CNPS List:**  
**Records in CNDBB:** No

## Vascular Plants

### *Abies amabilis*

Pacific silver fir  
PGPIN01010  
**Fed:** None  
**State:** None  
**RANK:** G5/S3.3  
**CNPS List:** 2  
**Records in CNDBB:** Yes

### *Abies bracteata*

bristlecone fir  
PGPIN01030  
**Fed:** None  
**State:** None  
**RANK:** G2/S2.3  
**CNPS List:** 1B  
**Records in CNDBB:** Yes

### *Abies lasiocarpa* var. *lasiocarpa*

subalpine fir  
PGPIN01072  
**Fed:** None  
**State:** None  
**RANK:** G5T5/S3.3  
**CNPS List:** 2  
**Records in CNDBB:** Yes

### *Abronia alpina*

Ramshaw Meadows  
abronia  
PDNYC01020  
**Fed:** Candidate  
**State:** None  
**RANK:** G1/S1.1  
**CNPS List:** 1B  
**Records in CNDBB:** Yes

### *Abronia maritima*

red sand-verbena  
PDNYC010E0  
**Fed:** None  
**State:** None  
**RANK:** G4?/S3?  
**CNPS List:** 4  
**Records in CNDBB:** No

### *Abronia nana* ssp. *covillei*
